# Introducing `Pident`

`Pident` is an audio playout system designed to make it easier to get the audio you want, when you want it. Cutting out needless "faff" makes for a simpler, smarter, and more effecient programme.

Learning your way around `Pident`

There are three parts to `Pident`:

Top bar

This has the reset button, navigation, and the engineering menu (which is hidden).

Main section

This is the section that will change. It's where you'll select the ident.

Base bar

This is where other audio can be triggered from.
